

Recruitment Gorilla User Guide

Recruitment Gorilla is the in-house applicant tracking system. Recruiters upload CVs, the system extracts the candidate's details for review, and every candidate moves through a hiring pipeline from **Uploaded** to **Hired**, with interviews, structured evaluations, offers, dashboards and a full audit trail along the way.

This guide is organized **by role**. Read *Getting started* first, then the chapter for your role. Every capability of a lower role is also available to the roles above it.

Last updated: 4 October 2026.

Contents

- Chapter 0: Getting started (everyone)
- Chapter 1: Interviewer guide
- Chapter 2: Recruiter guide
- Chapter 3: Admin guide
- Chapter 4: Super Admin guide
- Chapter 5: Appendix (permission matrix, pipeline map, FAQ)

The four roles at a glance

Roles form a hierarchy. Each role can do everything the roles below it can:

Super Admin > Admin > Recruiter > Interviewer

Role	In one sentence
Interviewer	Sees the interviews assigned to them and submits structured evaluations.
Recruiter	Uploads CVs, maintains candidate profiles, schedules interviews and drafts offers for the candidates they own or whose job opening they are assigned to.
Admin	Everything a Recruiter does, on <i>all</i> candidates, plus configuration, offer approval, candidate deletion and the audit trail.
Super Admin	Everything, plus user accounts, email settings and deleting job openings.

A user can hold **more than one role**. Their access is the combination of all of them.

About the screenshots: they were taken with demo accounts and fictional candidates (for example "Demo Recruiter" and "Sadiah Islam"). Your screens show your organization's data, but the layout is the same.

Chapter 0: Getting started

For everyone: signing in, your first login, and the parts of the app that look the same for every role.

0.1 Signing in

Open the application in your browser. Sign in with your **email address** and the password your administrator gave you.

Sign-in page

- After signing in you land on the **Dashboard**, or on the page you were trying to open.
- Your session stays active in the background until it expires or you sign out.
- On a shared computer, always **Sign out** from the user menu. It ends your session completely.

0.2 First login: set your own password

Accounts are created by a Super Admin with a **temporary password**. The first time you sign in, and after any password reset, the app takes you to *Change password* and keeps you there

until you choose your own password.

Update password

Change password

1. Enter the temporary password as **Current password**.

2. Choose a **New password** of at least 8 characters, different from the current one.

3. Enter it again in **Confirm new password** and select **Update password**. You are taken to the Dashboard.

You can change your password at any time from the **user menu** (your initials, top right) > **Change password**. You also get an email when your password changes.

0.3 Finding your way around

The **sidebar** on the left shows only the pages your role can use. Select the icon beside the logo to collapse it.

Sidebar group	Pages	Visible to
Overview	Dashboard	everyone
Overview	Analytics	Recruiter and above

Sidebar group	Pages	Visible to
Pipeline	Jobs, Upload CVs (with a count of drafts waiting), Candidates	Recruiter and above
Admin	Configuration, Audit	Admin and above
Admin	Users	Super Admin only

If you open a page your role cannot use, you are taken back to the Dashboard.

The **top bar** shows the page title and a one-line description, and on the right:

- **Theme** (sun or moon icon): Light, Dark, or System.
- **Notifications** (bell): a red badge counts unread items. Select one to open the related page, or **Mark all read**. The list refreshes about once a minute.
- **User menu** (your initials): your name, email and roles, **Change password** and **Sign out**.

Notifications list

0.4 The Dashboard

Everyone lands on the **Dashboard**. At the top, a greeting with "needs your attention" chips, such as *1 evaluation to complete*, *Next interview: ...* or *3 unread notifications*. Below it:

- Six organization-wide counts: **Total**, **In process**, **Recommended**, **Rejected**, **New this week** and **Referred**. Recruiters and above can select a count to open the matching candidate list.
- **My interviews**: the interviews you are assigned to.
- **Status breakdown** and **Applications** over 7, 30 or 90 days.
- **Active job openings**: open roles with their end date and number of applicants.

Recruiters and above also get a **My pipeline** section. See 2.2.

Chapter 1: Interviewer guide

You review the candidates you are scheduled to interview and submit a structured evaluation.
A recruiter cannot mark an interview as completed until at least one interviewer has submitted, so the pipeline waits for you.

1.1 What you can see

As an Interviewer you see the **Dashboard** and the **interviews assigned to you**. You cannot browse the candidate list. Each interview gives you a read-only view of that candidate, including their CV.

1.2 Your interviews

When you are assigned to an interview you get a **notification** in the app and an **email with a calendar invite**. The interview also appears under **My interviews** on your Dashboard:

Interviewer dashboard

- Each row shows the candidate, the job opening, the date and time (in red when it is less than 24 hours away) and your evaluation state: **Pending**, **Draft** or **Submitted**.

- Select a row to open the interview page.

1.3 The interview page

The screenshot shows the 'Interview' page in the Recruitment Gorilla system. The page is divided into a left sidebar and a main content area. The sidebar includes the 'RECRUITMENT GORILLA' logo, an 'OVERVIEW' section with a 'Dashboard' link, and a 'Notes from the recruiter' section with a text area for notes. The main content area is titled 'Interview' and includes a sub-header 'Review the candidate and record your evaluation.' Below this, there is a candidate profile card for 'Sadia Islam', a 'QA Engineer' with tags 'HR' and 'Technical'. The card also shows the candidate's email, a job opening 'QA Automation Engineer', the interview date and time 'Mon, Oct 5, 11:00 AM GMT+6 · 45 min · Tomorrow', and the interviewer 'Demo Interviewer'. The 'Interview evaluation' section shows a 'Standard 12--Criterion Rubric' and a 'Rated 0 of 12' badge. The evaluation form is divided into two main sections: 'Educational & Professional Background' and 'Technical Skills & Job Knowledge'. Each section has a title, a description, a rating scale (1-5), and an optional notes or examples text area. The 'Educational & Professional Background' section includes 'Relevance of Experience', 'Job Stability & Progression', and 'Educational Background'. The 'Technical Skills & Job Knowledge' section includes 'Core Technical Competency'.

Interview page

- **Header:** the candidate's name and email, the job opening, the interview type tags (for example *Technical*, *HR*), the date with its duration, and the interview panel.
- **View Profile & CV:** opens the candidate's profile in a side panel: contact details, experience, skills, summary, education, work history and the CV itself.
- **Notes from the recruiter:** what the recruiter wants you to know before the interview.
- **Interview evaluation:** the form, described next. The badge at the top shows which rubric is used and how many criteria you have rated.

The image shows a web application interface for 'RECRUITMENT GORILLA'. The main area is titled 'Interview' and 'Review the candidate and record your evaluation.' It features a sidebar with 'OVERVIEW' and 'Dashboard'. The main content area is divided into two panels. The left panel, 'Interview evaluation', contains sections for 'Notes from the recruiter', 'Educational & Professional Background', 'Relevance of Experience', 'Job Stability & Progression', 'Educational Background', and 'Technical Skills & Job Knowledge'. The right panel, 'Candidate Profile & Qualifications', displays details for 'Sadia Islam', a 'QA Automation Engineer'. It includes social and coding profiles (LinkedIn, GitHub), contact and sourcing details (Email, Phone, Location, Relevant Experience, Source), technical skills (Playwright, TypeScript, Cypress, CI), a professional summary, education (BSc in Computer Science, CGPA 3.50), and work experience (QA Automation Lead, 2022 - Present).

Candidate profile panel

1.4 Filling in the evaluation

The evaluation uses the **rubric** set for the job opening (by default, 12 criteria in four sections). Rate each criterion from **1 to 5** and add notes if useful:

- **Educational & Professional Background:** relevance of experience, job stability and progression, educational background.
- **Technical Skills & Job Knowledge:** core technical competency, tools and software proficiency, problem-solving.
- **Soft Skills & Communication:** communication clarity, listening, adaptability.
- **Cultural Fit & Motivation:** alignment with company values, motivation, team dynamics.

At the bottom, the **Overall evaluation** asks for:

- **General assessment:** free text on strengths, areas to improve and concerns.
- **Final recommendation** (required): **Recommended**, **Hold**, **Reject** or **Other** (Other asks you to explain).
- **Overall rating** (required): your single 1 to 5 verdict.

Submitted evaluation

After you submit, you can also see the evaluations other panel members have submitted for the same interview. You cannot see theirs before you submit your own.

Chapter 2: Recruiter guide

You run the pipeline: upload CVs, keep profiles accurate, move candidates from **Uploaded** towards **Hired**, schedule interviews and prepare offers.

2.1 Which candidates you can see

You can work with a candidate when **either** is true:

1. **You created them** (you are the owner), or
2. **You are an assigned recruiter of their job opening.** An Admin assigns recruiters to each opening in Configuration. Every candidate under that opening is then yours to manage, whoever created them.

This rule applies everywhere: the candidate list, profiles, CV files, status changes, offers, Analytics and your Dashboard. You **cannot delete** candidates; ask an Admin.

2.2 Your dashboard

Your Dashboard adds **Candidates** and **Upload CVs** shortcuts at the top:

Recruiter dashboard

Further down, **My pipeline** is scoped to your candidates, with a **Role** filter for one of your job openings: candidates by role, top skills, offer metrics, upcoming interviews and recent activity.

Recruiter dashboard: active job openings and My pipeline

2.3 Adding candidates: Upload CVs

Adding candidates has two steps: **upload** the CVs, then **review** what was extracted.

Step 1: Upload & Intake

1. Open **Upload CVs**.
2. Optionally enter a **Batch label** (for example "QA intake October") and pick the **Job opening** the CVs are for.
3. Drag PDF or Word (.docx) files onto the drop area, or select it to browse. Each file can be up to 10 MB, and you can drop many at once.

Upload & Intake

Each CV is read in the background and saved as a **draft**. When it finishes, select **Open Review Workspace**.

Upload finished

A CV the system already holds (waiting as a draft, or attached to a candidate) is skipped and marked **Duplicate**.

Step 2: Review Staging Workspace

Review Staging Workspace

- The left list shows your **Pending** drafts. Filter by job opening or upload batch, or search.
- The right side shows the extracted details for the selected draft. Check and correct them: name, email, phone, title, location, role applied for, relevant experience, sourcing channel, skills, summary, links, education and work history.
- **Approve & Create Candidate** creates the candidate at status **Uploaded**. **Save Changes** keeps your edits for later. **Discard Draft** removes it.
- Shortcuts: Ctrl+Enter approves, Ctrl+Left and Ctrl+Right move through the queue.
- Tick several drafts to **Approve Selected** or **Discard Selected** at once.

Required to approve: **Full name**, a valid **Email**, and a **Role applied for** that is active and not past its end date.

2.4 The candidate list

Candidates shows everyone you can access.

3 candidates

Show10per page

< Previous

Page 1 of 1

Next >

Candidate list

- Search by name, email or phone. Filter by status, role, batch, skills, or **Referred only**. **Clear filters** resets them.
- Sort by **Name**, **Status** or **Added** (newest first by default). Choose 10 to 100 rows per page.
- Your filters are kept in the page address, so you can bookmark or share a filtered list.

Switch to **Board** to see one column per pipeline stage:

Board view

Drag a card to another column to change its status. If the new status needs more details (for example an interview time), the **Add status** panel opens. A move that the pipeline does not allow is refused with a message.

2.5 The candidate profile

Select a candidate to open their profile:

Candidate profile

- **Header:** name, current status and job opening, plus **CV File** (preview and download), **Status history**, **Evaluation report**, **Add status**, and the ... menu with **Edit profile** (and **Delete candidate** for Admins).
- **Pipeline stepper:** Intake > Assessment > Interview > Offer > Hired.
- **Profile:** current position, LinkedIn and GitHub links, contact and sourcing details, skills, summary, education and work experience. Each part has its own **Edit** link.
- **Offer & Compensation:** appears once the candidate is recommended. See 2.8.

Status history opens the full timeline, newest first. Each entry shows the status, when and who changed it, the comment and any details (task, submission link, interview time, tags and panel). **Advance Stage** opens Add status from here.

Status history

If the job opening's **End Date** has passed, a "Job opening closed" banner appears and editing, status changes and offers are blocked for everyone until an Admin extends the date.

2.6 Moving a candidate through the pipeline

Select **Add status**, choose the **New status**, add a comment and **Save status**. Only the statuses allowed from the current one are offered. The main path is:

**Uploaded > Ask for Assessment > Technical Assessment > Submission Received > Code Review > Call for Interview > Interview Scheduled > Interview Completed > Recommended > Offer Preparation

Offer Extended > Offer Accepted > Hired**

You can also go straight from **Uploaded** to **Call for Interview**. Side exits such as **Not Available**, **Reject**, **Discontinued**, **No Submission**, **Not Recommended** and **Offer Declined** are offered where they apply. The full map is in 5.2.

Some statuses need extra details. The form asks for them:

Moving to...	You must provide
Technical Assessment	the task details and a comment
Submission Received	the submission link
Interview Scheduled	date and time and at least one interviewer
Interview Completed	a comment; at least one interviewer must have submitted their evaluation
Reject, Discontinued, Offer Declined	a comment explaining why
Recommended	the candidate must have passed Code Review or Interview Completed
Hired	the candidate must have Offer Accepted

2.7 Scheduling interviews

Choose **Interview Scheduled** in Add status and the form expands:

The screenshot displays the 'Recruitment Gorilla' interface. On the left is a sidebar with navigation options: Overview, Dashboard, Analytics, Pipeline, Jobs, Upload CVs (65), and Candidates (selected). The main area shows the profile of 'Tanvir Rahman', a QA Engineer. The profile includes sections for 'Intake' and 'Assessment', 'Current position & Role' (Full Stack Engineer), 'Social & Coding Profiles' (LinkedIn, GitHub), 'Contact & Sourcing Details' (Email: tanvir.rahman@exam..., Phone: +8801700000000), 'Technical Skills' (Node.js, React, PostgreSQL, Docker), 'Professional Summary' (Full Stack Engineer with 6 years of experience), and 'Education & Academics' (BSc in Computer Science, University of Dhaka).

Overlaid on the right is the 'Add a status' form. It contains the following fields:

- New status ***: A dropdown menu with 'Interview Scheduled' selected.
- Interview date/time ***: A date/time picker showing 'mm/dd/yyyy'.
- Duration**: A dropdown menu with '60 minutes' selected. Below it, a note says 'Sets the end time on the calendar invite sent to interviewers.'
- Interview types**: A dropdown menu with 'Tag this interview (Technical, HR, 1st Level...)' selected. Below it, a note says 'Optional tags shown on the status history and interview page.'
- Interviewers ***: A dropdown menu with 'Search users to assign...' selected. Below it, a note says 'Assigned users are notified and can fill the evaluation form.'
- Notes for interviewers (optional)**: A large text area for notes, with a note below it saying 'Shared with the assigned interviewers on the interview page.'

At the bottom right of the form are 'Cancel' and 'Save status' buttons.

Scheduling an interview

- **Interview date/time** (required) and **Duration** (15 to 120 minutes).
- **Interview types:** optional tags such as *Technical*, *HR*, *1st Level*.
- **Interviewers** (required, one or more): each gets a notification, an email with a calendar invite, and the interview on their Dashboard.
- **Notes for interviewers:** shown to the panel as "Notes from the recruiter".

Completing an interview. After the panel has submitted, move the candidate to **Interview Completed**. **Evaluation report** then shows every submitted evaluation, the average overall rating, the recommendations and the average per criterion. Use **Print** or **Open as a page** to share it.

The screenshot displays the Recruitment GORILLA interface. On the left is a sidebar with navigation options: Overview, Dashboard, Analytics, Pipeline, Jobs, Upload CVs (65), and Candidates (selected). The main area is divided into two panels. The left panel shows the candidate profile for Sadia Islam, a QA Engineer. It includes a status bar with 'Interview Completed', a pipeline with 'Intake' and 'Assessment' steps, and sections for 'Current position & Role' (QA Automation Engineer), 'SOCIAL & CODING PROFILES' (LinkedIn, GitHub), 'CONTACT & SOURCING DETAILS' (Email: sadia.islam@exampl..., Phone: +880170000...), 'Technical Skills' (4 skills: Playwright, TypeScript, Cypress, CI), 'Professional Summary' (QA Automation Engineer with 5 years of experience building...), 'Education & Academics' (1 item: BSc in Computer Science, Chittagong University), and 'Work Experience' (1 item). The right panel is the 'Evaluation report' for Sadia Islam - QA Engineer. It shows a summary with an average overall rating of 4.0/5 and 1 recommendation. Below this is a table of criteria with ratings: Relevance of Experience (4.0), Job Stability & Progression (4.0), Educational Background (3.0), Core Technical Competency (5.0), Tools & Software Proficiency (4.0), Problem-Solving Skills (4.0), Communication Clarity (4.0), Listening Skills (3.0), Adaptability & Flexibility (4.0), Alignment with Company Values (5.0), Motivation & Enthusiasm (4.0), and Team Dynamics (4.0). The report is dated Oct 5, 2026, 11:00 AM and is categorized as HR and Technical. It shows a 'Demo Interviewer' (A. Educational & Professional Background) with a submitted evaluation for 'Relevance of Experience' (4.0). At the bottom right are buttons for 'Open as a page' and 'Print'.

Evaluation report

Another round? From **Interview Completed** you can schedule again. The new interview gets its own panel and evaluations, and the history keeps both rounds.

2.8 Offers

Once a candidate is **Recommended**, the **Offer & Compensation** card lets you prepare an offer.

1. Select **Draft Offer** and fill in the job title, **annual base salary**, currency, and optionally bonus, equity, start date, expiry date and notes. **Create Offer**. The candidate moves to **Offer Preparation**.

The screenshot shows the 'Recruitment Gorilla' interface. On the left is a sidebar with navigation links: Overview, Dashboard, Analytics, Pipeline, and Jobs. The main area displays a candidate profile for 'sadia.islam@exampl...'. The profile includes contact details (Email, Phone), technical skills (Playwright, TypeScript, Cypress, CI), a professional summary, education (BSc in Computer Science), and work experience (QA Automation Lead). A modal titled 'Draft New Employment Offer' is open on the right. It contains fields for Job Title / Position (QA Engineer), Annual Base Salary (120000), Currency (USD), Signing / Annual Bonus (Optional) (e.g. 15000), Equity / Options (Optional) (e.g. 10,000 RSUs or 0.25%), Proposed Start Date (mm/dd/yyyy), and Offer Expiration Date (mm/dd/yyyy). There is also a text area for Additional Terms & Notes (e.g. Standard benefits package, 4 weeks PTO, hybrid schedule...). At the bottom of the modal are 'Cancel' and 'Create Offer' buttons.

Drafting an offer

2. **Request Approval** sends it to an Admin, who approves or rejects it (a rejected offer goes back to draft). Approval is optional: you can also **Extend Offer** straight from a draft.

The screenshot shows the 'Recruitment Gorilla' interface with a candidate profile for 'sadia.islam@exampl...'. The profile details are the same as in the previous screenshot. At the bottom, the 'Offer & Compensation' section is highlighted with a 'Pending Approval' status. It shows the offer title 'QA Automation Engineer', created by 'Demo Recruiter', and a salary of 'BDT 1,800,000.00 / year (gross)'. Below this, there are fields for Bonus / Incentive (BDT 150,000.00), Proposed Start (Nov 1, 2026), and Valid Until (Oct 18, 2026). A text area for 'Hybrid, 3 days in office.' is also present. A 'Download PDF' button is at the bottom right.

Offer waiting for approval

3. **Extend Offer to Candidate** moves the candidate to **Offer Extended**. Send the offer itself outside the app (use **Download PDF**).
4. **Record Candidate Decision: Accepted** moves the candidate to **Offer Accepted**; **Declined** (with a reason) moves them to **Offer Declined**.

5. Finally, use **Add status > Hired**.

New Version starts a revised offer. The app never emails candidates; all candidate communication happens outside it.

2.9 Jobs and Analytics

Jobs gives an overview of every job opening: totals, active and closing-soon counts, each opening's status, priority, deadline progress, rubric and assigned recruiters. Select an opening's candidate count to see those candidates. Openings are created and edited by Admins in Configuration.

Jobs

Analytics shows average time to hire, pipeline velocity, funnel conversion, stage dwell time (stages over 7 days are flagged), sourcing channel performance and recruiter workload. Choose a period (7 days to All time) and a job opening. As a Recruiter you see figures for your own candidates only. **Print Report** prints the page.

Chapter 3: Admin guide

*You keep the system running for everyone else. An Admin can do everything a Recruiter can, on **all** candidates, plus approve offers, maintain configuration, delete candidates and review the audit trail.*

3.1 What Admin adds

Capability	Notes
See and manage all candidates	no ownership or assignment limits
Approve or reject offers	on offers a recruiter sent for approval
See evaluation cards in the Status history	recruiters see them in the Evaluation report
Delete a candidate	permanent: removes the profile, history and CV files
Configuration	rubrics, skills, sources, interview types, job openings
Audit	the who-changed-what-when log

3.2 Approving offers

An offer waiting for approval shows **Approve Offer** and **Reject** to Admins:

In the candidate's **Status history**, Admins also see each interviewer's evaluation card (recommendation and overall rating) under **Interview Completed**:

Status history with evaluation cards

3.3 Configuration

Configuration has one tab per list. Each tab has search and All, Active and Inactive filters.

Configuration: Evaluation rubrics

Tab	What you manage
Evaluation rubrics	The scorecards interviewers fill in: sections, criteria and weights. Create, edit, duplicate, set the default, or delete (the default rubric cannot be deleted).
Skills	Skill tags offered on candidate profiles and in filters.
Candidate sources	Where candidates come from (LinkedIn, Employee referral...), used in Analytics.
Interview types	Tags recruiters attach when scheduling (Technical, HR, 1st Level...).
Job openings	Each opening's name, Closes date (required), priority, location, department, rubric , recruiters and Active flag.

For skills, sources and interview types, deleting an item that is already in use deactivates it instead, so history is kept.

Configuration: Job openings

Job openings drive access and locking, so keep them current:

- **Recruiters:** assigning a recruiter gives them every candidate under the opening.
- **Closes date:** after it passes, the opening locks: no edits, status changes or offers for its candidates until you extend the date.
- **Rubric:** the scorecard interviewers use for this opening (the default rubric if none).
- Deleting an opening is **Super Admin only**.

3.4 Deleting a candidate

On the candidate list (row menu) or the profile (... menu), Admins have **Delete**. After you confirm, the candidate, their history and CV files are removed permanently. The deletion is recorded in the audit trail.

3.5 The audit trail

Audit answers "who changed what, and when":

Audit

Every change is recorded: sign-ins (including **failed** attempts), password changes, candidate changes and status moves, evaluations, offers, configuration and user management. Each row shows the time, the person, a colored action (for example `Offer.Created`, `Auth.LoginFailed`), the record and a summary.

Filter by **Entity type**, **Action contains** and a **From / To** date and time, then **Filter**. Results are newest first, 50 per page. The log cannot be edited or deleted by anyone.

Chapter 4: Super Admin guide

You own the accounts. A Super Admin can do everything an Admin can, plus manage users, email settings, deleting job openings and importing candidates from JSON.

4.1 What Super Admin adds

Capability	Notes
Users page	add users, set roles, activate or deactivate, reset passwords
Email tab in Configuration	the mail server used for invites and account emails
Delete a job opening	Admins can only edit or deactivate openings
JSON + CVs import on Upload CVs	import candidates from a filled-in JSON template plus their CVs

4.2 Managing users

Users lists every account with name, email, roles, status, last login, and whether they must change their password.

Add user and provide:

- **Name** and **Email**. The email is the sign-in and must be unique.
- **Roles**: one or more of Super Admin, Admin, Recruiter, Interviewer.
- **Temporary password** (at least 8 characters). The user gets an email and must set their own password at first sign-in (see 0.2).

A screenshot of a web form titled "Add user" with a close button (X) in the top right corner. The form contains five fields: "Name" (text input), "Email" (text input), "Roles" (checkboxes for SuperAdmin, Admin, Recruiter, and Interviewer), and "Temporary password" (text input). Below the password field is a note: "At least 8 characters. The user must change it on first login." At the bottom right are "Cancel" and "Save" buttons.

Add user X

Add user

Choosing the right role:

- Only conducts interviews: **Interviewer**.
- Sources and manages candidates: **Recruiter**, then have an Admin assign them to job openings, or they will only see candidates they create themselves.
- Maintains configuration, approves offers or needs to see everything: **Admin**.
- Keep **Super Admin** to the smallest possible group.

Edit changes a user's name, roles and Active flag. **Deactivate** stops the account from signing in and from being assigned to interviews; its history is kept. There is no delete. **Reset password** sets a new temporary password; the user is emailed and must change it at next sign-in.

Guard rail: the system refuses to deactivate, or remove the role from, the **last active Super Admin**, so you cannot lock everyone out.

4.3 Email settings

The **Email** tab (Super Admin only) holds the mail server settings: host, port, STARTTLS, username, password, sender address and name, plus **Email Delivery** on or off and a test

send. The app emails **users** only (interview invites, new accounts, password resets and changes), never candidates.

4.4 Importing candidates from JSON

When you already have candidate details in structured form (an export from another system, a spreadsheet, or an AI assistant's summary of each CV), you can import them instead of relying on CV parsing. Every candidate still needs their CV, and every import still lands in the Review Staging Workspace for approval.

1. Open **Upload CVs** and choose **JSON + CVs** (only Super Admins see this switch).
2. Select **Download JSON template**. The comments at the top of the file are the instructions: the mandatory fields (**cvFileName**, **fullName**, **email**), the optional ones, and the job opening and source names you can use. They are current on the day you download the file.
3. Fill in one entry per candidate, by hand or by giving the template and the CVs to an AI assistant. The comments are written so an assistant can follow them; the importer ignores them, so it does not matter whether they are kept.
4. Set **cvFileName** to each CV's exact file name, for example `jane_doe.pdf`.
5. Optionally enter a **Batch label** and a default **Job opening** for entries that name no role.
6. Drop the JSON file together with all the CVs onto the drop area.

The pre-check table shows every entry before anything is saved:

- **Ready**: the entry will be imported.
- **Ready, check notes**: it will be imported, but something needs attention in review, such as a role or source name that does not match (that field is left blank for you to pick) or an email that already belongs to a candidate.
- **Will be skipped**: something is wrong, such as a missing mandatory field, an invalid email, or no CV with that file name. The reason is shown on the row.

Select **Import N candidates**. Each entry becomes a **Pending** draft with its CV attached, filled in from the JSON. Then select **Open Review Workspace** and approve the drafts as in 2.3. A CV the system already holds is marked **Duplicate** and not imported.

4.5 Deleting job openings

Only Super Admins can delete an opening in Configuration. If candidates were ever filed under it, the opening is deactivated instead and the app shows how many candidates block deletion.

4.6 Good habits

- Check **Audit** now and then for bursts of `Auth.LoginFailed` and unexpected user or role changes.
- Deactivate accounts of people who leave. The **Last login** column shows inactive accounts.
- Keep each opening's **recruiters** and **Closes** date current: they control access and locking.

Chapter 5: Appendix

5.1 Permission matrix

Capability	Super Admin	Admin	Recruiter	Interviewer
Dashboard	Yes	Yes	Yes	Yes
Assigned interviews and evaluations	Yes	Yes	Yes	Yes
Analytics, Jobs	Yes	Yes	own scope	-
View and browse candidates	all	all	own or assigned opening	assigned interviews only
Upload CVs and create candidates	Yes	Yes	Yes (becomes owner)	-
Import candidates from JSON	Yes	-	-	-
Edit candidates, change status	all	all	own or assigned opening	-
Evaluation report	all	all	own or assigned opening	-
Draft and extend offers	Yes	Yes	own or assigned opening	-
Approve or reject offers	Yes	Yes	-	-
Delete candidate	Yes	Yes	-	-
Configuration	Yes	Yes	-	-
Delete a job opening	Yes	-	-	-
Audit	Yes	Yes	-	-
Users, Email settings	Yes	-	-	-

5.2 The pipeline map

From	Can move to
Uploaded	Ask for Assessment, Call for Interview, Not Available, Reject, Discontinued
Ask for Assessment	Technical Assessment, Not Available, Discontinued
Technical Assessment	Submission Received, No Submission, Not Available, Discontinued
Submission Received	Code Review
Code Review	Call for Interview, Not Recommended, Not Available, Discontinued
Call for Interview	Interview Scheduled, Not Available, Discontinued
Interview Scheduled	Interview Completed, Not Available, Discontinued
Interview Completed	Recommended, Not Recommended, Interview Scheduled (another round), Not Available, Discontinued
Recommended	Offer Preparation, Offer Extended, Reject, Discontinued
Offer Preparation	Offer Extended, Offer Declined, Reject, Discontinued
Offer Extended	Offer Accepted, Offer Declined, Reject, Discontinued
Offer Accepted	Hired, Offer Declined, Discontinued
Offer Declined	Offer Preparation, Reject, Discontinued
Not Recommended, Not Available, Hired	Discontinued
No Submission, Reject, Discontinued	(final, no further moves)

Offer actions on the Offer card (draft, extend, record decision) move the candidate automatically.

5.3 FAQ

I'm a Recruiter and I can't see a candidate I know exists. You only see candidates you created or that belong to a job opening you are assigned to. Ask an Admin to add you as a recruiter of that opening (Configuration > Job openings).

The "Role applied for" list is empty when I review a draft. You have no assigned openings yet, or the opening has closed. Ask an Admin.

I can't edit a candidate or change their status. Check for the "Job opening closed" banner. Once the opening's Closes date passes, it locks for everyone until an Admin extends it.

Why can't I move the candidate to Interview Completed? At least one assigned interviewer must **submit** (not just save a draft) their evaluation first. Their Dashboard shows it as *Pending* or *Draft*.

My upload says Duplicate. That exact file is already in the system, as a draft or on a candidate. Find the existing record instead.

The interviewer can't edit their evaluation. Submitted evaluations are locked by design. If another round is needed, schedule a new interview from Interview Completed.

I deleted a candidate by mistake. Can it be undone? No. Deletion is permanent, which is why it is Admin-only and asks for confirmation. The audit trail still records who deleted what and when.

Why am I stuck on Change password? Your account has a temporary password (new account or reset). Set your own and the app unlocks.

Does the candidate get emails from the system? No. The app emails users only. Communication with candidates, including sending offers, happens outside the app.

Can one person be both Recruiter and Interviewer? Yes. Roles combine.
